Calculating STAAR Progress Measures

Step 1. Determine if the student should receive a STAAR progress measure.

In order to receive a progress measure, a student must meet ALL of the following criteria within the same content area (reading, mathematics, or writing):

- Have a valid score from the prior year and the current year
- Have tested in successive grade levels or end of course (EOC) tests in the prior year and the current year. Students who took the same grade-level or EOC test in the prior year and the current year will not receive a progress measure. Students who skipped a grade level between the prior year and the current year, with the exception of grade 7 mathematics to Algebra I, will not receive a progress measure.
- Have taken the same version or type of test in the prior year and the current year (i.e., STAAR, STAAR Modified, or STAAR Alternate)
- Have taken tests in the same language in the prior year and the current year (i.e., English or Spanish)

Note that students identified as limited English proficient (LEP) and tested in Spanish language test versions must also meet the criteria above. LEP students tested in English language test versions will not receive a STAAR progress measure.

If a student does not meet one or more of these criteria, the student will not receive a progress measure. Some students may meet the criteria and receive a progress measure for one content area but not another.

The following steps apply for students who took STAAR tests. Additional documentation for STAAR Modified and STAAR Alternate progress measures will be posted in fall 2013.

Step 2. Compile the needed information to compute a STAAR progress measure.

In order to calculate the progress measure, the following student information is needed:

- Test information from the current year, including
  - Grade level
  - Content area
  - Test language (English or Spanish)
  - Scale score
  - Raw score
  - Performance level (Level I, Level II, or Level III) based on the performance standards in place in the current year (phase-in 1, phase-in 2, or final recommended)

- Test information from the prior year, including
  - Grade level
  - Content area
  - Test language (English or Spanish)
  - Scale Score
  - Performance level (Level I, Level II, or Level III) based on the performance standards in place in the prior year (phase-in 1, phase-in 2, or final recommended)

- Gain score = Current-year scale score – Prior-year scale score
Step 3. Compute STAAR progress measure.

Use the “Guide to Computing STAAR Progress Measures” and Table 1 on the following pages to calculate a student’s STAAR progress measure.
Guide to Computing STAAR Progress Measures

Does the student’s raw score fall within the *top score range* on the *current-year test*?

No

Does the student’s raw score fall within the *chance score range* on the *current-year test*?

No

Calculate the *gain score* by subtracting the *prior-year test* scale score from the *current-year test* scale score.

Level I or Level II

What was the student’s performance level on the *prior-year test* (based on the standards in place in the prior year)?

No

Is the student’s *gain score* greater than *Met Level I/II*?

Yes

Level III

Is the student’s *gain score* greater than *Met Level III*?

Yes

No

Did the student achieve Level III performance on the *current-year test* (based on the standards in place in the current year)?

No

Is the student’s *gain score* greater than *Exceeded*?

Yes

No

Did Not Meet Progress

Met Progress

Exceeded Progress

</tbody>
</table>

1 Met Level I/II is the distance or difference between the final recommended Level II standards on the current-year and prior-year tests.
2 Met Level III is the distance or difference between the Level III standards on the current-year and prior-year tests.
3 Exceeded is the distance or difference between the current-year test Level III standard and the prior-year test final recommended Level II standard.
4 Top Score Range is the range of the top three possible raw scores on the current-year test.
5 Chance Score Range is the range of raw scores that could be reasonably attained through guessing alone. For reading and mathematics tests, chance is defined as \( \frac{1}{4} \) of the multiple-choice questions. (Scores of zero are used for reading short answer questions to define chance.) For writing tests, chance is defined as \( \frac{1}{4} \) of the multiple-choice questions plus the weighted value associated with summed scores of 2 on the essays (representing a rubric score of 1 from both readers).
6 Applies for both English and Spanish mathematics.
An Example: STAAR Grade 4 Mathematics

Step 1. Determine if the student should receive a STAAR progress measure.

The student meets **ALL** of the criteria for mathematics.
- The student has a valid score for mathematics in 2012 and a valid score for mathematics in 2013
- The student tested in successive grade levels (grade 3 in 2012 and grade 4 in 2013) in mathematics.
- Both mathematics tests were the same version or type of test (STAAR)
- Both tests were taken in English.

Since the student meets all the criteria, the student will receive a progress measure in mathematics.

Step 2. Compile the needed information to compute a STAAR progress measure.

In order to calculate the progress measure, the following student information is needed:
- Test information from the current year, including
  - Grade level – 4
  - Content area – mathematics
  - Test language – English
  - Scale score – 1481
  - Raw score – 30
  - Performance level – Level II (based on phase-in 1 standards)
- Test information from the prior year, including
  - Grade level – 3
  - Content area – mathematics
  - Test language – English
  - Scale Score – 1336
  - Performance Level – Level I (based on phase-in 1 standards)
- Gain score = 1481 – 1336 = 145

Step 3. Compute STAAR progress measure.

The following page illustrates how the student information from Step 2 and the values in Table 1 are used to determine the value of the STAAR progress measure.
An Example: STAAR Grade 4 Mathematics

Is the student’s raw score between 46 and 48 (top score range) on the current-year test, grade 4 mathematics?

No, 30 is not in the range

Is the student’s raw score between 0 to 11 (chance score range) on the current-year test, grade 4 mathematics?

No, 30 is not in the range

Calculate the gain score by subtracting the prior-year test, grade 3 mathematics, scale score from the current-year test, grade 4 mathematics, scale score.

1481 – 1336 = 145

Level I or Level II

What was the student’s performance level on the prior-year test, grade 3 mathematics?

Was the student’s gain score greater than a 70 (Met Level I/II)?

Yes, 145>70

Was the student’s gain score greater than a 62 (Met Level III)?

Did the student achieve a Level III score for the current-year test, grade 4 mathematics?

Was the student’s gain score greater than a 148 (Exceeded)?

No, 145<148
